"We are delighted to be able to work more formally with the team at d3 Medicine. They have great credibility in the market and when combined with the unique virology capabilities and expertise of Viroclinics Biosciences, we believe that through our partnership we offer customers the most comprehensive and exciting range of development services available in the virology field. We can support our biopharmaceutical customers with the best virological knowledge available and provide them with integrated and optimally customised development programs and project solutions."

Dr Bob van Gemen, CEO of Viroclinics Biosciences

We believe that

it is time to **challenge the current dogma** of how biopharmaceutical companies are engaging CRO's and consultants whereby ad hoc selection to address important questions during the product development lifecycle can result in an unnecessarily fragmented and disconnected approach to R&D.

There is an opportunity to **offer more value to clients** by combining expertise into integrated project teams, dedicated to realizing accelerated preclinical and clinical development of drugs, biologicals, vaccines and diagnostics targeting viral infectious diseases.

The unique synergy between d3 Medicine's high impact healthcare solutions and Viroclinics' operational virology capability, combined with access to an extensive network of external key advisors creates a powerful, all-inclusive service platform **covering the full spectrum of development stages** of pharmaceutical targets.

From early clinical development strategy to pricing and reimbursement negotiations and commercial transactions, the alliance of d3 Medicine and Viroclinics allows the **design and execution of robust and customized data packages** to address individual client needs.

"We are thrilled to formalise collaborations with Viroclinics Biosciences - a recognised global leader in diagnostic, preclinical and clinical operation services in the virology space."

Biopharmaceutical companies now can turn to d3 Medicine and Viroclinics Biosciences to develop and implement their preclinical, clinical and regulatory strategies when developing therapeutics, vaccines and diagnostics for viral infectious diseases"

Dr Craig Rayner, CEO and co-Founder of d3 Medicine

ABOUT d3 MEDICINE LLC

d3 Medicine is a biopharmaceutical drug development strategic advisory company founded by a group of pharmaceutical company executives with decades of drug development experience. d3 Medicine aims to address the prevailing R&D market failure and to assist in the development of medicines that matter to society, for the people that need them most. It is committed to delivering impactful healthcare solutions through developing and executing value focussed drug development programs, business development strategies and technical due diligence.
